

Staff Safety Panic Alert System

Provide a Real-Time Response to the Right Person at the Right Time

AiRISTA Flow Staff Safety™ solution will help you meet your needs in Personnel Safety, Compliance and more.

Challenge

Employee safety is a top concern of healthcare delivery organizations. But providing real time *response to compromising situations has been a challenge*. Current solutions are complex and expensive. And the use of cell phone apps is not a practical way to ensure coverage for all staff members.

Solution

For a solution to be effective, it must be:

- ✓ Easy to install
- ✓ Cost affordable subscription
- ✓ Compliant with emerging regulations
- ✓ Inclusive of all staff
- ✓ Simple to maintain
- ✓ Low startup costs

AiRISTA Flow's staff safety solution provides wearable tags that relay push button panic alerts over your existing Wi-Fi infrastructure. Access to a dedicated cloud portal puts immediate response time in your hands. Alerts can be delivered to security personnel, management, and even coworkers in the vicinity with the name & location of the person in distress. The report interface ensures your organization is in compliance with state and local requirements.

Result

Responders receive real-time alerts with the location and ID of the employee in distress. An alert is escalated if it persists beyond a designated period. Forensic playback develops best practices and continuous improvement. Reports help ensure compliance with established and emerging regulations.

"The AiRISTA Flow safety solution was easy to install and implement. Our staff is more efficient and feels safe when working alone or one-on-one with patients!"

- California State Hospitals

STAFF SAFETY SOLUTIONS

HEALTHCARE

How it Works

Beautiful in its simplicity, the solution consists of beaconing radio devices secured in each area monitored (e.g. patient room) and personnel tags. When a tag's alert is activated, the tag relays the ID of the nearest beacons and the tag ID over the existing wireless network to the portal. Response rules configured in the portal direct the best responders to the person and location.

Your employees can quickly push a panic button on a variety of wearable tags. If they are using the B4 badge tag, the lanyard offers an instant release and alert notification.

Two-way communication allows staff and security to receive text messages and acknowledge or escalate with programmable buttons.

How to get started?

- Provide your floorplans which will be posted to your private cloud portal
- Order tags and beacons based on employee count and number of rooms
- Install the pre-labeled beacons in designated rooms and areas
- Log into your private cloud portal and setup users and response rules. You are now ready for your first system test!

SOLUTION BENEFITS

- Low monthly subscription price for complete package
- Intuitive private cloud portal for management & reporting
- Frees IT of hosting & management
- Easy to deploy with virtually no IT involvement
- Leverage the investment in your Wi-Fi infrastructure
- Tag rotation program
- Solution expands as your needs grow
- Proven technology in hundreds of use cases
- Multiple support channels

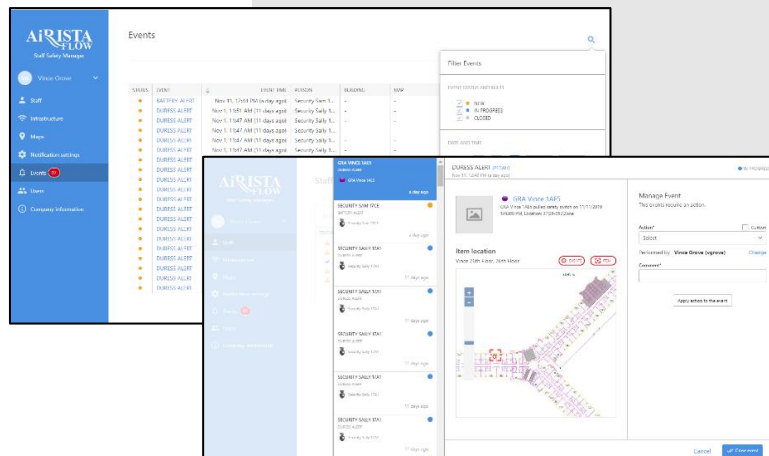

WHY AiRISTA FLOW

Experts in wireless RTLS for over 10 years, AiRISTA Flow understands elegant solutions.

Airista Flow was awarded #1 vendor in Gartner's Magic Quadrant for BOTH "vision" AND "execution" among RTLS Challengers (2019).
